Observer's Notes :

The month up to the 24th was generally mild & wet, from the 14th to the 22nd it was very wet, raining either by day or night, no 24 hrs being continuously fine. The 24th was a beautiful sunny day, but at night snow fell & all the next day & up to the present traces of it remain, more especially on the higher ground. The actual snowfall for the 24+25th produced .96 in of rain here. The latter part of the month was cold & mainly dull. We are fortunate here that the snow caused no serious flooding.

N.B. I notice on the Dec figures you give my height here as 210 ft above sea level. That was the figure when I was at Hoxington. This place is about 250 ft.

Signed : Percy Parsons.

Observer's Notes :

February was on the whole a very nice month. Generally mild & with a good deal of sunshine. No snow fell here, but the last 3 days were unsettled with slight hailstorms.

No large quantity of rain at any time & although wind was high at times, no severe gale was experienced.

Aurora borealis was visible on the evening of the 24th but was not so brilliant as on January 1938.

Observer's Notes :

March was colder than February & slight rains were frequent but the total for the month is low. Despite the chilly winds spring flowers have done well. Primroses, violets & daffodils have been quite early. Fruit trees are keeping back well, which may be all for the best. A warm, showery April will be welcomed by the farmers to bring on the spring frosts.

2.24

Observer's Notes :

The month has been very changeable, sometimes quite warm, at others just the reverse. Beginning showers, after the 5th we had a week without rain & during Easter the weather was fine. Towards the end of the month it became quite cold with frost at night, but not enough to hurt vegetation seriously. I should say the month ended with things about what we should expect in a normal season.

Observer's Notes :

The driest month of the year to date, & far too dry for vegetation to flourish as it should. The wind has been mostly between N & S which has kept the air dry & cool, especially at nights. There has been no frost to do damage. Some farmers have begun haymaking before the month ended thinking possibly when the fine spell does break up we shall have nothing but rain every day for weeks on end, similar to last year. If they don't cut it, it will only decrease instead of increase in bulk. In many ways a 24 hrs steady soaking rain would do much good.

Observer's Notes :

The beginning of June was similar to the latter part of May, & was ideal weather for haymaking. From the 12th to the 24th however it was unsettled with measurable rain every day. Thunder was heard on the 20th & the 30th. The month has been rather windy & was particularly strong from N & N.E. on the 21st snapping off twigs & branches from elms & other trees.

Observer's Notes :

July is the wettest month of the year to date. Haymaking has been a very catchy business & from the 13th impossible to do anything, almost continuous rain day or night. Heavy thunderstorms on the 21st & 24th but we missed the cloud burst on the 21st that enveloped South Cherido, although the rain here was very heavy. Winds have been mainly between South & West & rather strong at times, but no gale. Five or six weeks really warm, dry weather now wanted.

Observer's Notes :

A disappointing August with only about a weeks continuous fine weather very wet at the beginning of the month & on the 20th over $1\frac{1}{2}$ inches of rain fell accompanied with vivid lightning & thunder. There was also thunder on the 3rd, 4th & 21st apart from the 11th to 19th it was almost impossible to dry grass & make it into hay & there is still much to be cut. A long spell of settled weather is very much needed.

Observer's Notes :

The month started off unsettled & rainy, but after the 10th the amount was very small, the weather becoming colder & drier, with winds more from the North East. Toward the end of the month frosts were a bit more intense than any previous this season. Snow fell on the 28th followed by rain, but all the snow did not disappear, although it was only a slight fall that we had.

2120/5

HORSINGTON MARSH

1932-39

on and also the space for

register should be sent:—

conk, Somerset

in Summer 10 a.m.

Direction from gauge SW

Direction from gauge W.S.W.

780401

Directions from
gauge ..

N.W.

SE.

If gauge has been moved during the year state—

Date of move..... Distance..... Direction.....

Indicate pattern of gauge in use by deleting those sketches of cross sections of gauges which do not represent it. If the pattern is different from any of these please make a sketch of it. (Good gauges to use are those marked A and B.)

If the gauge is of a self-registering or self-recording type please give particulars.

If you know of any record of rainfall not quoted in British Rainfall, please give the observer's name and address:—

NOTES ON EXCEPTIONAL RAINFALL OF THE YEAR.

In giving particulars of falls of unusual intensity it is desirable that answers to the following questions be supplied:—

- Is it known that the gauge was empty at the beginning of the measured rainfall?
- What note was made of the times of beginning and end of this fall?
- When was the measurement made?

The gauge is 5 in diameter & was supplied by Sutton & Sons, Seedsmen, Reading, together with the measuring glass, but I don't think this is stamped, but I assume it is correct coming from this very reliable firm. If you would like to supply a stamped one free of charge (well good)

D

INSTRUCTIONS

1. Rules for measuring the rainfall and for correctly recording the measurements are given in "Rules for Rainfall Observers," to be obtained gratis from The Director, Meteorological Office, Air Ministry, London, W.C.2, or from The Superintendent, Meteorological Office, 6, Drumsheugh Gardens, Edinburgh.

2. In filling up the register on the reverse side the following rules should be observed. Those rules which apply also to the summary form above are printed in *italic type*:—

- Rain should be measured each morning, preferably at 9 a.m., Greenwich Mean Time. The measurement is to be credited to the previous day and should be entered in the register at the time of observation. Thus the entry for January 1st is the rainfall for the 24 hours following 9 a.m. on January 1st; it is therefore the amount measured on January 2nd. 9 a.m. Greenwich Mean Time is 10 a.m. by the clock during Summer Time Period.
- The rain-gauge should be visited every morning without exception. When there has been no precipitation the entry in the register should be a dash— (not 0.0). The entry "trace" or "tr" is to be made in the two following cases, (A) and (B).
 - When there is less than .05 mm. of water in the gauge and the observer knows that this is not the result of a drop or two draining from the sides of the can after emptying the rainwater out of it at a previous time of observation, i.e., the observer must be reasonably certain that there has actually been precipitation since the preceding measurement. If the observer knows that the precipitation has been in the form of dew or wet fog this may be noted.

- The observer knows definitely from his own observation that some rain (or other form of precipitation such as snow, hail, sleet or drizzle) has fallen since the preceding observation, and yet finds no water in the gauge. This happens sometimes especially in dry, warm weather, without the gauge being even damp, the small amount of rain having evaporated before it got into the receiving can.
- On some measures there is graduation marked .005; this graduation is to show the limit between the amounts which count as 0.1 and those which are mere "traces." An entry .005 is not to be made in the register.
- If the morning observation has to be omitted for one day or more, the days covered by the next reading should be indicated by a bracket. Thus 17 | } .14 would show that the reading on the morning of the 18th day of the month was missed and that the reading on the morning of the 19th was .14 in.
- The total rainfall for the month is found by addition. The addition should always be done a second time as a check. The check is of special importance when the total has already been found in another copy of the register.
- The "number of days with .01 in. or more" includes all the days with any rain except those for which the entry is "trace." The "number of days with .04 in. or more" includes all the days with any rain except those for which the entries are trace, .01, .02 or .03.
- If observations are not available for every day during the month the spaces for the number of days with rain should be left blank.
- The heaviest daily fall for each month should be underlined.

D

E

If you know of any record of rainfall not quoted in British Rainfall, please give the observer's name and address:—

NOTES ON EXCEPTIONAL RAINFALL OF THE YEAR.

In giving particulars of falls of unusual intensity it is desirable that answers to the following questions be supplied:—

- Is it known that the gauge was empty at the beginning of the measured rainfall?
- What note was made of the times of beginning and end of this fall?
- When was the measurement made?

A201542/4

* See Instruction 3 (f) below.

D

INSTRUCTIONS.

1. Section A should be completed in the case of gauges read daily. Information on Section B is required only if Section A cannot be filled in. Section C should also be completed. Rainfall registers should be forwarded to The Director, Meteorological Office, Air Ministry, London, W.C.2, or The Superintendent, Meteorological Office, 6 Drumsheugh Gardens, Edinburgh 3.

2. Rules for measuring the rainfall and for correctly recording the measurements are given in "Rules for Rainfall Observers," to be obtained gratis from the addresses given in 1 above.

3. In filling up the register on the reverse side the following rules should be observed. Those rules which apply also to the summary form above are printed in *italic type*:—

(a) Rain should be measured each morning preferably at 9 a.m. Greenwich Mean Time. The measurement is to be credited to the previous day and should be entered in the register at the time of observation. Thus the entry for January 1st is the rainfall for the 24 hours following 9 a.m. on January 1st; it is therefore the amount measured on January 2nd.

9 a.m. Greenwich Mean Time is 10 a.m. by the clock during Summer Time Period.

(b) The rain-gauge should be visited every morning without exception. When there has been no precipitation the entry in the register should be a dash — (not 0.0). The entry "trace" or "tr" is to be made in the two following cases, (A) and (B).

(A) When there is less than .005 in. of water in the gauge and the observer knows that this is not the result of a drop or two draining from the sides of the can after emptying the rainwater out of it at a previous time of observation, i.e., the observer must be reasonably certain that there has actually been precipitation since the preceding measurement. If the observer knows that the precipitation has been in the form of dew or wet fog this may be noted.

(B) The observer knows definitely from his own observation that some rain (or other form of precipitation such as snow, hail,

sleet or drizzle) has fallen since the preceding observation, and yet finds no water in the gauge. This happens sometimes especially in dry, warm weather without the gauge being even damp, the small amount of rain having evaporated before it got into the receiving can.

(c) On some measures there is graduation marked .005; this graduation is put on for the purpose of assisting observers in reporting "trace" of rain. Readings below this mark are entered as "trace" if the conditions stated in paragraph (b) are satisfied. Readings on this .005 mark or between this .005 and the .01 mark are to be entered as .01 even though they may be nearer to the .005 mark than the .01 mark. In this particular case the general rule of reading to the nearest mark is superseded by this special instruction. An entry .005 is not to be made in the register.

(d) If the morning observation has to be omitted for one day or more, the days covered by the next reading should be indicated by a bracket. Thus 17 | 14 | would show that the reading on the 18th day of the month was missed and that the reading on the morning of the 19th was .14 in.

(e) The total rainfall for the month is found by addition. The addition should always be done a second time as a check. The check is of special importance when the total has already been found in another copy of the register.

(f) The "number of days with .01 in. or more" includes all the days with any rain except those for which the entry is "trace." The "number of days with .04 in. or more" includes all the days with any rain except those for which the entries are trace, .01, .02 or .03.

(g) If observations are not available for every day during the month the spaces for the number of days with rain should be left blank.

(h) The heaviest daily fall for each month should be underlined.

4. The columns are so spaced that the entries can be made by a typewriter.
